Question 1: Which CSS property is used to control the stacking order of overlapping elements? - a) `z-index` - b) `stack-order` - c) `order` - d) `layer` Correct Answer: a) `z-index` Explanation: The `z-index` property specifies the stack level of an element, determining which element appears on top when elements overlap. Higher values bring the element to the front. The `order` property relates to Flexbox and Grid layout ordering but doesn't control stacking in the z-axis. `stack-order` and `layer` are not valid CSS properties. ---

Question 2: Which of these CSS properties is used to create a rounded corner effect? - a) `border-radius` - b) `corner` - c) `border-curve` - d) `border-shape` Correct Answer: a) `border-radius` Explanation: The `border-radius` property allows you to specify rounded corners for elements by defining the radius of the curve.
