sep 22 2010 super is a special use of the super keyword where you call a parameterless parent constructor in general the super keyword can be used to call overridden methods access hidden

nov 3 2015 the one without super hard codes its parent s method thus is has restricted the behavior of its method and subclasses cannot inject functionality in the call chain the one with super has

feb 23 2009 super lets you avoid referring to the base class explicitly which can be nice but the main advantage comes with multiple inheritance where all sorts of fun stuff can happen

jul 9 2018 thirdly when you call super you do not need to specify what the super is as that is inherent in the class definition for child below is a fixed version of your code which should perform

may 29 2015 a diretiva super sem parênteses permite ainda invocar métodos da classe que foi derivada através da seguinte syntax super metodo isto é útil nos casos em que faça override

in fact multiple inheritance is the only case where super is of any use i would not recommend using it with classes using linear inheritance where it s just useless overhead

oct 30 2012 the implicit class used by super does not exist at this point thus referencing the superclass by the hardcoded name as one had to do prior to super in python2 will work and is the

dec 18 2024 super object has no attribute sklearn tags this occurs when i invoke the fit method on the randomizedsearchcv object i suspect it could be related to compatibility issues

as for chaining super super as i mentioned in the question i have still to find an interesting use to that for now i only see it as a hack but it was worth mentioning if only for the differences with java

i m currently learning about class inheritance in my java course and i don t understand when to use the super call edit i found this example of code where super variable is used class a
